Walthers Proto® E7A & E7B

To add a SoundTraxx Tsunami2 Digital Sound Decoder to your non-sound E7A or E7B model (announced in February 2007), you'll want to install a TSU-2200 EMD decoder.

If you have an E7A or E7B model without sound that you would like to upgrade, purchase SoundTraxx P.N. 885005. This board is designed to simply plug into the factory PCB that supplies power to the locomotive. **You can complete this installation in one to two hours with no modification required to the model.**

Tsunami2™ The Sound Upgrade
